NORTHERN CYPRUS CAMPUS

Data Management and File Structures

Assignment 1

Zanyar kozan 2584985

Group 53

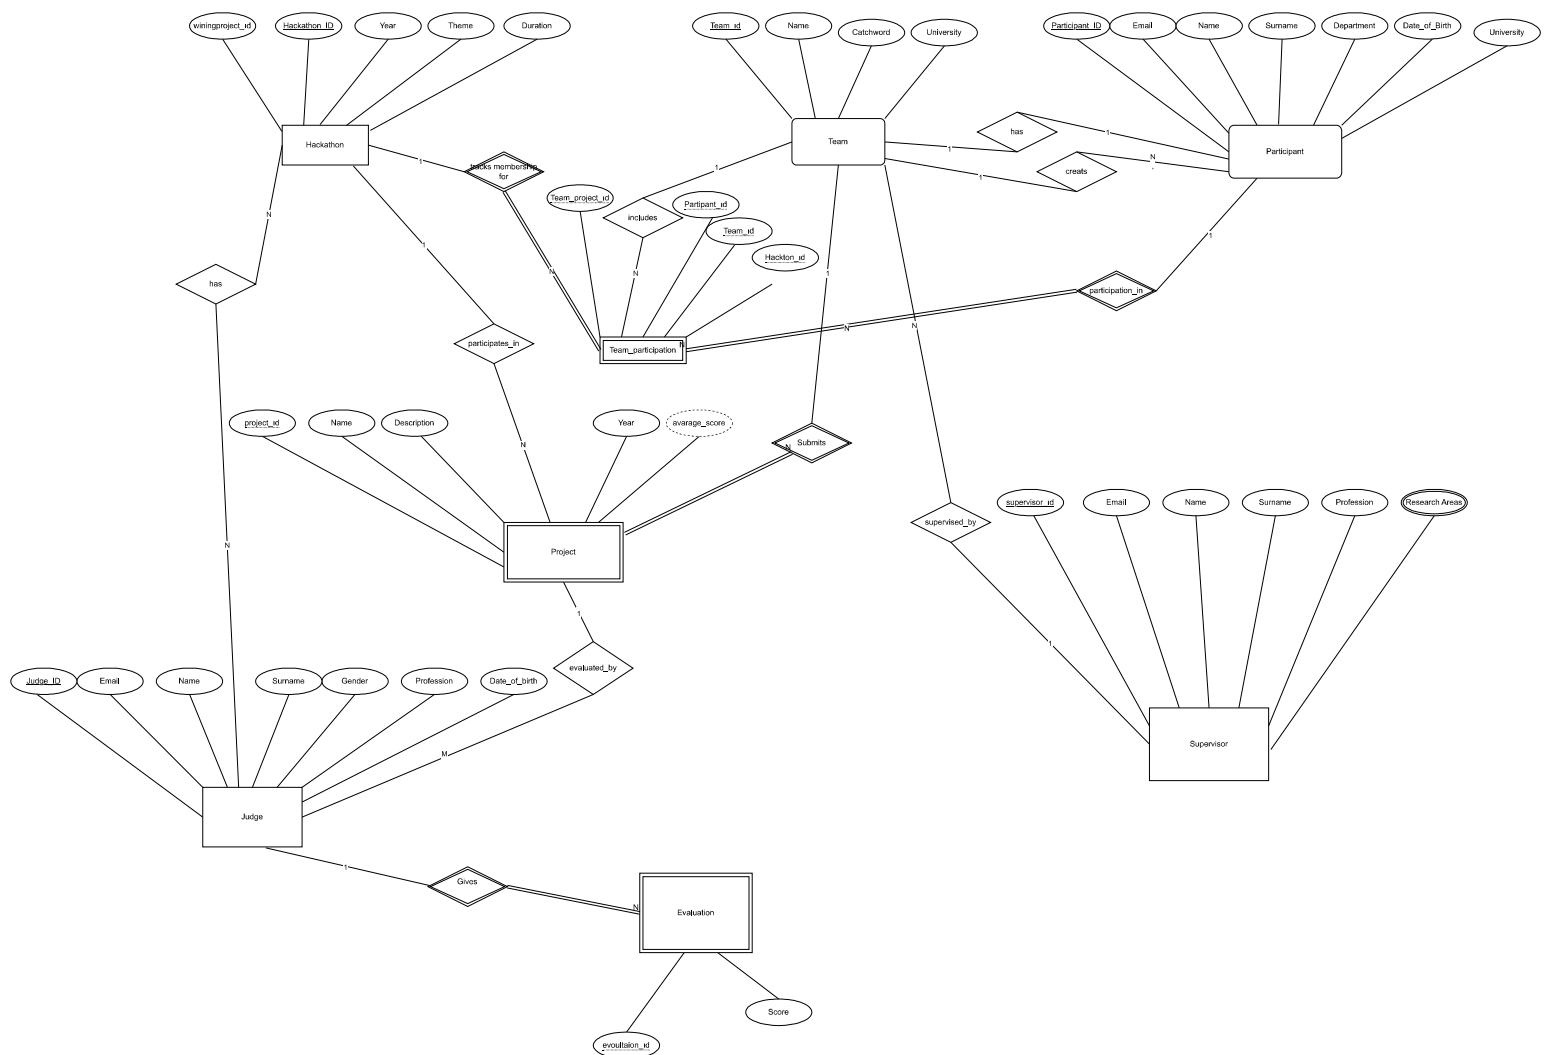

-) A student can have more than one device and if there is a device registered in the system, it must be the owner

-) A device is recorded only once, if there is a record, there must be a device connected to this record.

-) A network engineer can register multiple times and deal with multiple network issues.

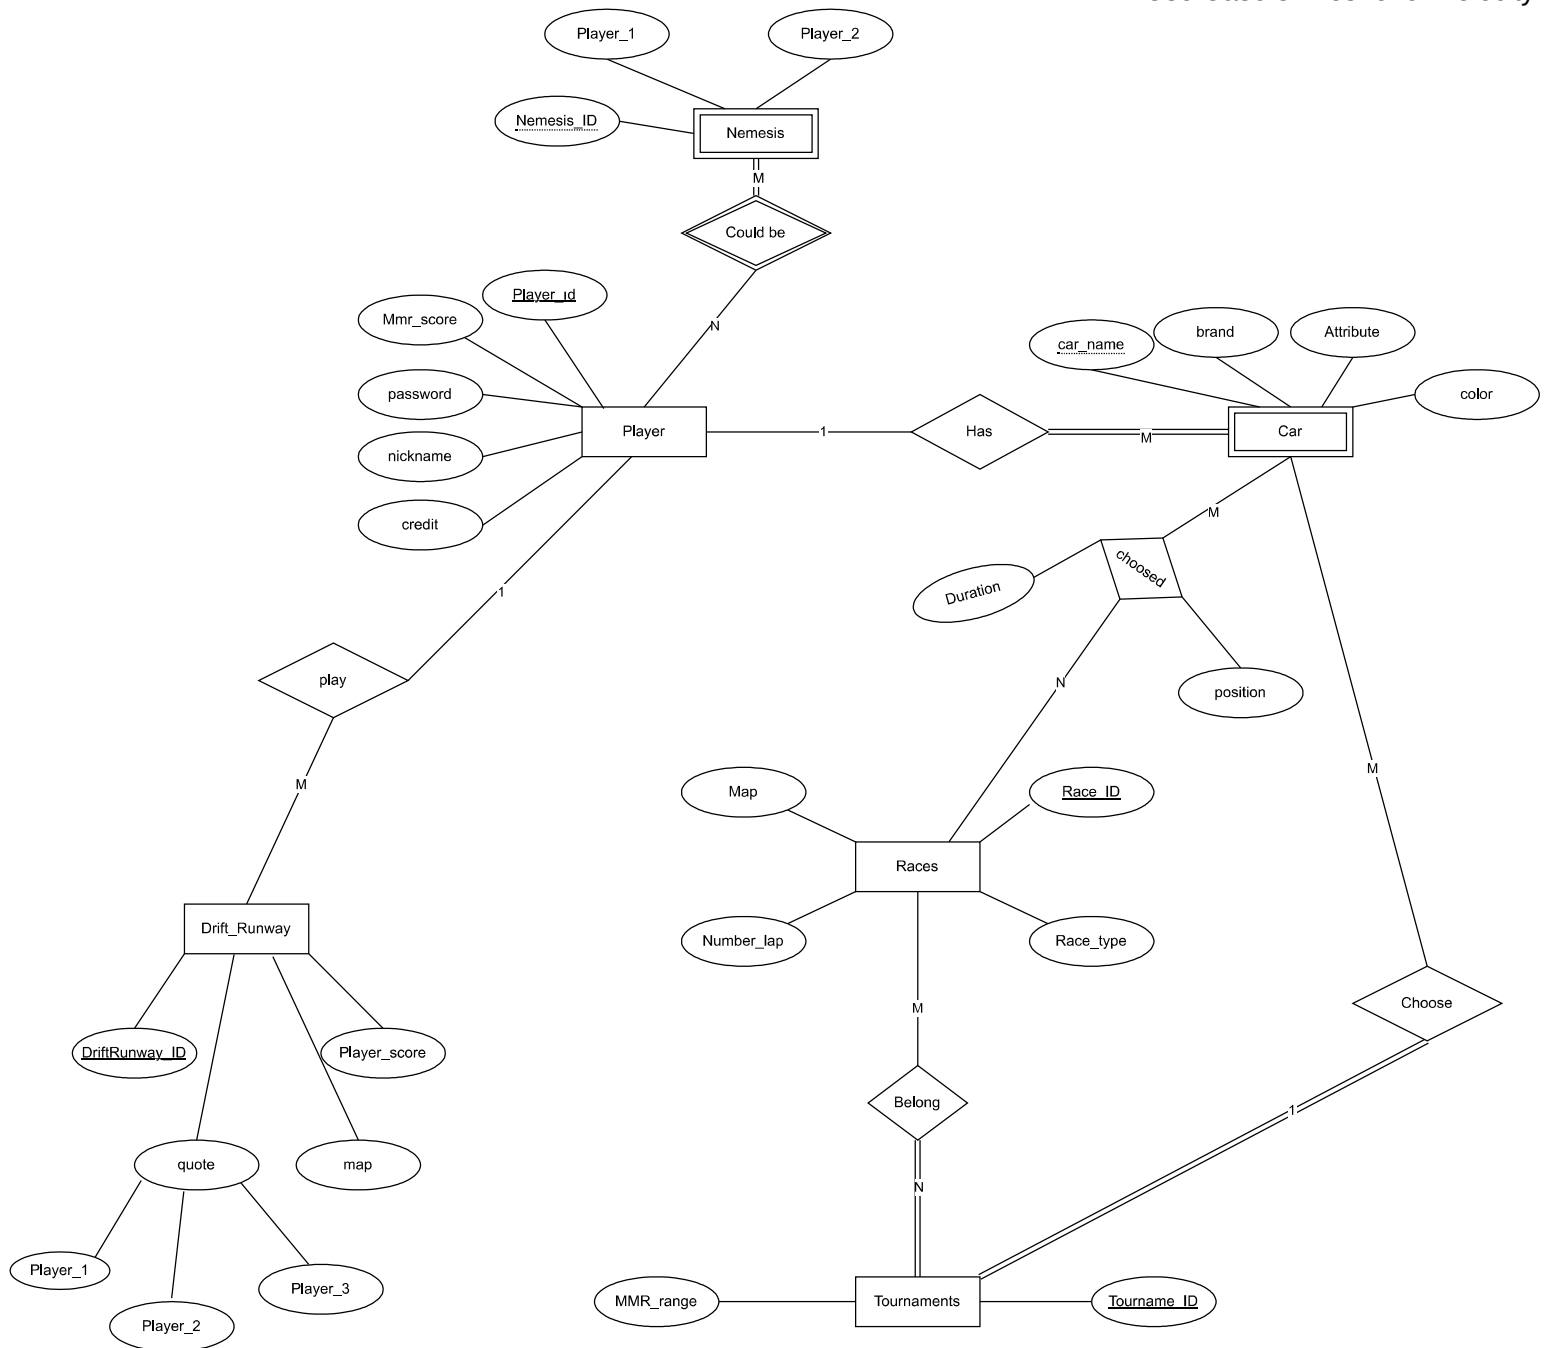

-) If there is a network problem, there should be a registry related to it and there should be a network engineer looking into it.

Added supervisor_id for supervisor entity.

A weak entity was added for evolution and given evolution_ID. Its existence was made dependent on judges.

A weak entity named team participation was added, its existence was made dependent on hackathon and participation. and 4 attributes were added to specify its feature, thus each participant was able to specify which team they participated in a hackathon with.

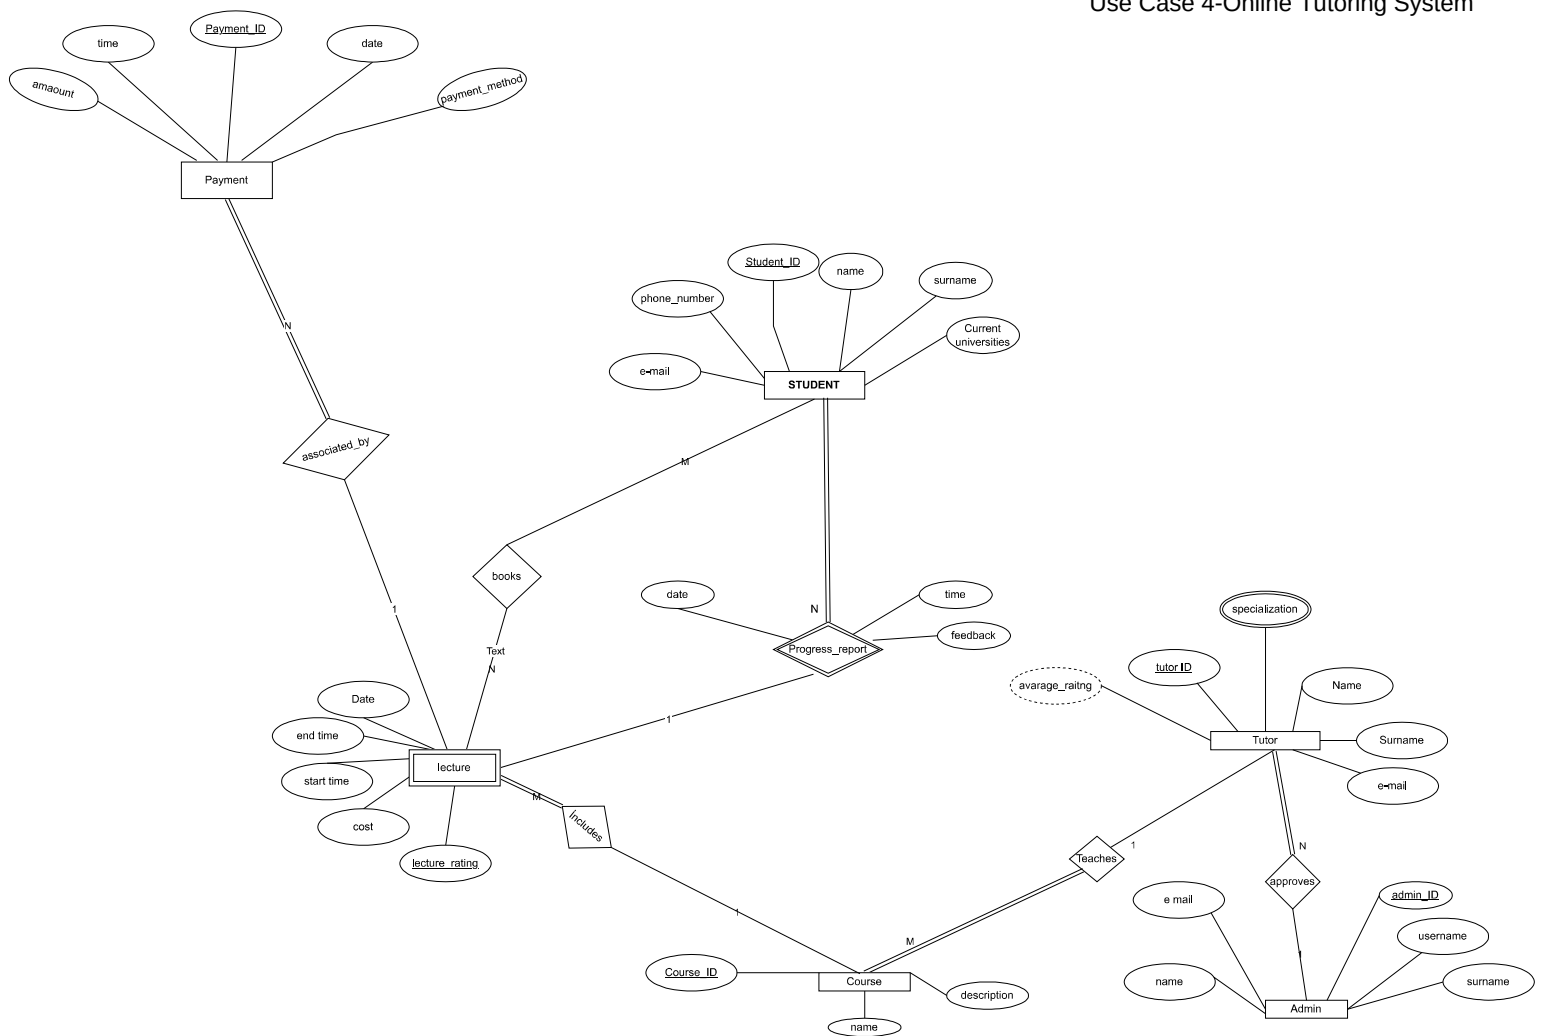

You can participate in the race with the car you own also many car can choosed on many races.

In tournaments, there must be a car chosen by the player. You can only choose the car once. and Since tournaments consist of more than one race, a many to many relationship is established.

Quote keeps data of top 3 players.

Nemesis takes the data of 2 players who meet and makes them unique with the nemesis id (weak entity)

Since the drift mode is single player, a one to many relationship was established.
